Art Unit: 1732

DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 18-20 and 24-26 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 17 of U.S. Patent No. 6,503,624 B2 (Ikeda et al) in view of Takemoto et al (U.S. Patent 4,812,361 A). Ikeda et al claims a wet-spinning process for making acrylic fiber as set forth in the instant claims, except that Ikeda et al does not claim the spinneret characteristics, for

Art Unit: 1732

making acrylic fiber having a non-circular cross-section (note that Ikeda et al is directed to making acrylic fiber having a non-circular cross-section). Takemoto et al (see the entire document, in particular, col. 2, line 51 to col. 3, line 5; Example 4) teaches a wet-spinning process for making acrylic fiber having a non-circular cross-section including the spinneret characteristics, and such would have been obvious to one of ordinary skill in the art at the time the invention was made in the process of Ikeda et al in view of Takemoto et al principally in order to manufacture acrylic fiber for apparel and home furnishings. The amount of acrylonitrile polymer claimed (i.e., 80 wt.% or more and less than 95 wt.%) would have been obvious to one of ordinary skill in the art at the time the invention was made in view of Ikeda et al since Ikeda et al claim 95 wt.% or more of acrylonitrile polymer.

Response to Arguments

3. Applicant's arguments with respect to claims 18-20 and 24-26 have been considered but are moot in view of the new ground(s) of rejection.
